Office Action Summary	Application No. 10/607,688	Applicant(s) OTSUKA, MASAHIRO	
	Examiner Todd E. Manahan	Art Unit 3732	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boutoussov et al. (United States Patent No. 6,439,888) in view of Adam et al. (United States Patent No. 6,419,483).

Boutoussov et al. disclose a dental curing apparatus comprising a light source which is an LED array 200 including a plurality of LEDs 210 arranged such that traveling directions of light rays emitted therefrom become the same direction. A guide member 140 guides the light rays to a predetermined position. A cooling fan 300 forcibly cools the LED array, the drive motor of the fan, and the LED drive circuit (see figure 2). Boutoussov et al. disclose the invention essentially as claimed except for the LED array being driven by a drive electric current larger than a rated electric current. Adam et al. discloses a dental curing apparatus having an LED array as the light source. The LED array is overdriven by supplying a current larger than the rated electric current to increase the intensity of the light emitted and provide faster curing (see col. 3, lines 2-9; col. 5, line 67 through col. 6, line 4). It would have been obvious to one skilled in the art to drive the LED array of Boutoussov et al. by a drive electric current larger than a rated electric current in view of Adam et al. in order to increase the intensity of the light emitted and provide faster curing.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Todd E. Manahan whose telephone number is 571 272- 4713. The examiner can normally be reached on Mon-Fri.
